1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-17, drawn to a “disk drive system” with a “charge-control additive”, classified in class 360, subclass 323.
  - II. Claims 18-24, drawn to a “disk drive system” with a “replacement lubricant”, classified in class 360, subclass 97.01.
  - III. Claims 25-31, drawn to a “disk drive system” with a “lubricant” having a “DC relative electrical permittivity no greater than about 25,000”, classified in class 360, subclass 99.08.
  
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, the subcombination of group I has separate utility such as usable in a disk drive system not including a “replacement lubricant having a lower relative electrical permittivity”, for instance. See MPEP § 806.05(d).

Inventions of groups I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, the subcombination of group I has separate utility such as usable in a disk drive system including a lubricant with a DC

relative electrical permittivity "greater than about 25,000 at 50°C", for instance. See MPEP § 806.05(d).

Inventions of groups II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, the subcombination of group II has separate utility such as usable in a disk drive system including a lubricant with a DC relative electrical permittivity "greater than about 25,000 at 50°C", for instance. See MPEP § 806.05(d).

3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification and/or because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Louis L. Wu on 13 April 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Craig A. Renner whose telephone number is (571) 272-7580. The examiner can normally be reached on Tuesday-Friday 9:00 AM - 7:30 PM.
